RE: THE STUMBELBLOC INTERLOCKING CONCRETE BUILDING SYSTEM

In 2011, we were approached by Stumbelbloc South Africa and asked to review the Stumbelbloc System and its viability in Zimbabwe. In doing so, we performed a variety of tests on the quality of the concrete Stumbelblobs themselves, as well as their ease of usage in the construction process, their practical application and the cost effectiveness of the system as a whole.

We found that the Interlocking Concrete Blocks were highly cost effective to manufacture in Zimbabwe. We also found that the Stumbelbloc System was extremely simple to use, to the extent that unskilled workers were able to efficiently build with Stumbelbloc after receiving minimal formal training. We also found that the building process was up to 10x faster using Stumbelbloc in comparison to using traditional bricks and mortar.

The above benefits when coupled with the incredible strength of the Stumbelblobs themselves convinced us to undertake a wide variety of construction projects using the Stumbelbloc System such as Cottages, Guard Houses, Store Rooms and Boundary Walls. We have also designed various Houses which can be built using the Stumbelbloc System for Low, Medium and High Density Developments.

Gardini Construction (Pvt) Ltd. are therefore pleased to officially recommend the Stumbelbloc System as it has proven to be a valuable building system with many positive benefits for the construction industry as well as the general populace.

Yours faithfully,

Roberto Gardini
Managing Director
Gardini Construction (Private) Limited.
